

Recapped.io - Senior Software Engineer - \$100k – \$180k + stock options

Company: Recapped is the most exciting sales-acceleration solution in the game today! We allow modern sales teams to instantly create mutual action plans that dramatically enhance the collaboration and sales process for both clients and their teams. Simply put, we believe that when collaboration is done the Recapped way, it becomes a superpower.

<https://techcrunch.com/2021/07/19/recapped-lands-6-million-for-collaborative-sales-software-that-gets-the-customer-in-the-mix/>

Desired profile: product-minded engineer who loves building beautiful, world-class products. As a founding member of our engineering team, you'll be working closely with our product and design teams to maintain the Recapped standard of excellence. We are a ground floor team that is obsessed with growth and progress and we give one another a lot of support and respect.

Tech stack: React, HTML, CSS, Javascript, Elixir & Phoenix (bonus)

Vic.ai – Mid/Senior Software Engineer - \$100k – \$190k + stock options

Company: Vic.ai is creating the “Intelligent Accounting” era, using artificial intelligence to automate accounting and provide advisory, business insight, and eventually business foresight. We’re a Series A stage start-up, founded by three Norwegian entrepreneurs and backed by renowned Silicon Valley investors (including Costanoa Ventures, Cowboy Ventures, and GGV Capital). We’re US-based, but our team is global, from New Zealand to California. We’re bringing AI to Finance and Accounting because the industry is ripe for automation and big-data insight and the market is huge: \$200B just in the US.

Desired profile: You’ve been a software engineer for 5+ years, but you’ve been a tinkerer and a builder your whole life. We’re a team of builders—when we aren’t building Vic.ai, we’re tinkering with a personal project, contributing to open source, modding a drone, building a computer from components, etc. We’re looking for an experienced developer who enjoys working with server-side technologies. You possess a good mixture of DevOps and application development skills and would like to build innovative solutions with experienced teammates in a flexible environment.

Tech stack: Elixir, Phoenix, PostgreSQL, Python (bonus), Frontend (bonus)

WonderSchool – Mid/Senior Software Engineer - \$100k – \$190k + stock options

Company: Wonderschool’s mission is to ensure every child has access to a child care program that helps them realize their full potential. Our passionate team members are fulfilling this mission through the development of a suite of tools designed to support a variety of stakeholders including families, in-home child care providers, child care centers, nonprofits, governments and employers.

Desired profile: 5+ years of relevant professional experience as a backend or full stack engineer

Previous experience with Elixir and React in production; our current stack is Postgres, Elixir/Ecto/Absinthe, GraphQL, React/React Native/Typescript

Fully owning and delivering a feature end to end, from requirements analysis and task breakdown to milestone definition and delivery

Tech stack: Elixir, Phoenix, React, Postgres, GraphQL, Typescript

Hawku – Senior/Lead Software Engineer - \$100k – \$190k + stock options

Company: Hawku is creating the premier marketplace for utility and gaming NFTs - a multi-billion dollar industry that is exploding in growth. Hawku launched in June 2021 as a data-analysis site for Zed.run and within 3 months reached 3M monthly page views. Hawku is backed by some of the top VCs in the web2.0 and crypto industries including Lightspeed Venture Partners, Dragonfly Capital and Multicoon Capital.

Desired profile: You will be working with a technical, data-driven and product-focused team. The founder is an Elixir developer and MBA with 20+ years of experience starting and growing companies. You will be working on developing the central Hawku marketplace web app, linking together game and meta-verse specific data with for sale and bid listings - all in Elixir.

Tech stack: The company works in a PETAL framework (Phoenix, Elixir, Tailwind, Alpine, Liveview) with some web3 add-ons in Typescript.

KevalaCare – Senior/Principal Software Engineer - \$100k – \$200k + stock options

Company: Kevala is reshaping the way healthcare organizations manage and engage their internal and external care teams. By delivering purpose-built SaaS that automates healthcare scheduling and compliance while maximizing employee preference and collaboration, Kevala helps to ensure that all shifts are filled with happy, engaged care teams.

Desired profile: 5+ years of software engineering experience, Experience in a start-up environment is a huge plus, You enjoy working on frontend, backend, and DevOps, An understanding of the full software development lifecycle and experience in SaaS/Healthcare is a real plus!

Tech stack: Elixir, Phoenix, GraphQL, Javascript, Vue, TailwindUI, Postgres, Redis, and RabbitMQ, Heroku and AWS

SeatScouts – Mid/Senior Software Engineer - \$100k – \$180k + stock options

Company: At Broker Genius, we are an industry-leading SaaS provider helping brokers in the event ticket industry automate their everyday. We build all of our software with Elixir and Amazon Web Services (AWS).

You would be responsible for building out our suite of ticket automation tools by contributing throughout the entire software stack. Our customers rely on us to automate their business critical tasks accurately and with low latency. We engineer all our systems from the ground-up in Elixir to achieve these goals.

Desired profile: Ability to work 100% remote with a distributed team (North America). Required experience: Production at-scale Elixir development and deployment
Preferred experience: AWS, PostgreSQL, and React, Web Sockets

Tech stack: In addition to Elixir we also use Phoenix, Ecto, React, PostgreSQL, Oban, and WebSockets too.

Beluga Tech – Mid-Senior Elixir Engineer (backend focus) – Food/Hospitality industry

Would you like to join as employee #11 in a start-up where the CEO and CTO have a proven entrepreneurial background with recent successful exits with Microsoft and Google respectively?

The team are looking for a mid-senior Elixir engineer (or senior Ruby with Elixir interest) to join them as they revolutionize the dining industry. Their platform which has already generated a significant customer base offers restaurants and restaurant go-ers a fantastic new POS experience.

They leverage Elixir/Phoenix to provide a contactless and efficient experience for foodies, including us AI and ML to tailor bespoke preferences for all those who use their platform.

On offer is a great base salary with Health insurance etc fully paid as well as real equity in a company that has 2 leaders who really know how to scale and exit a business successfully.

TalentWall– Mid-Senior Elixir or Ruby Engineer – Hiring platform

This client have been completely organically funded and following 5 years of sustained growth in both sales and revenue they are looking to have a huge 2022.

The dev team is currently running with 6 remotely distributed senior engineers (across the US) and they are looking to add to this to build their Elixir/LiveView application. They will consider strong Ruby devs also. FYI they use the PETAL stack.

Their hiring platform is a first of its kind using visual candidate management and beautiful automated analytics dashboards that are revolutionizing hiring practices at some of the fastest growing companies in the world.

On offer is generous base salary alongside parental and vacation leave with health benefits and 401k match.

The process for both of these clients is 2 stage, first meeting with CTO/VP of eng. And then second meeting the team and respective CEO. (No take home tests!)
